

Create a Flask Application

Project Name: Skill and Job Recommender

Team ID: PNT2022TMID33634

The screenshot shows the PyCharm IDE with a project named 'flask#ibm'. The file explorer on the left shows the project structure, including a 'project_content' folder with subfolders 'ibm_db_connect' and 'templates'. The 'run.py' file is open in the editor, showing the following code:

```
1 from project_content import *
2
3 if __name__ == '__main__':
4     app.run(debug=True)
5
6
```

The terminal window at the bottom shows the output of the application running. It indicates that the Flask app is serving on http://127.0.0.1:5000 and that the debugger is active. The terminal also shows two GET requests from 127.0.0.1, one for the root URL and one for the favicon.ico file.
